### SHIRINDA DINING TABLE

**Product:** SHIRINDA DINING TABLE

**Designer:** Christison Lewis Inc.

**Materials:** Solid Hand-Cast Glass Top and Hand Cast and Pressed Cylindrical Glass Base

**Color/Texture:** each component of the Shirinda Dining Table is hand-cast with a standard clear soda lime glass. Each batch of glass is hand-mixed and melted and therefore may have a slight color variance. There is typically a light golden to very subtle green tone to the glass due to the iron content of the raw materials used and its significant mass. The inherent "chill texture" results from the glass chilling slightly when poured into the graphite mold.

**Description:** All glass components are hand-cast in California. The glass top and the glass base are separate pieces. The glass base consists of a large cylinder of glass that has been cast and pressed into a graphite mold using a proprietary process. This is a very unique technique and thus these table bases are not available anywhere else in the world.

**Options:** Also available in custom glass colors and sizes, Custom colors and sizes are subject to upcharge and significantly longer lead times.

**Dimension:** 48 inches diameter x 2 inches thickness

54 inches diameter x 2 inches thickness
